Final Project Planning Phase

This portion of the project focuses on planning what you will need to support your chosen web app and project.

For my final project I would like to make a fake conference website. I am going to deploy Wordpress via Digital Ocean and either alter an existing theme or make a theme of my own depending on what I am able to learn for WordPress.

The fake conference website is going to have a welcome page with the general overview of the conference. There will be tabs section which will include the events, places to eat (Yelp widget pro), and hotels. Included towards the bottom of the main page I will include the WP google maps plugin to show the location of the fake conference.

Lastly I will need to add a registration page that will take the information of attendees for the conference. I believe there are also plenty of plugins for this as well so I will have to experiment with which one will be the best for this. I know WordPress has the ability to add PayPal but since this is going to be a fake site I believe I will add a pseudo pay section on the registration page.
